Binomial PMF and Normal PDF Approximation ($n = 300, \theta = 0.25$)
Normal PDF: $\mathcal{N}(\mu = 75, \sigma^2 = 56.25)$
CLT Interval $60 \leq Y \leq 90$: $\phi(2) - \phi(-2)$
Binomial PMF: $Y \sim \text{Bin}(300, 0.25)$
